4. Cost and Charges & investment Scenarios:

Spreads:

The Spread values vary for different accounts as well as depend on the instrument traded. The Spread is floating; therefore, it may increase depending on the market conditions and the volatility. Spread is a cost present both at entering and exiting a trade, and it applies to all the accounts.

Example

| Volume in Instrument traded | [1 standard lot in EUR/USD] |
|---|---------------------------------------|
| Current Bid/Ask price | 1.00000/1.00004 |
| Spread (difference between Bid/Ask price) | 0.00004 |
| Cost Calculation (volume traded i.e. lots*point size*spread) | $1*100,000 * 0.00004 = 4 \text{ USD}$ |

Swap / Rollover Fee

As explained above, the Swap fee is the cost for keeping a position held open overnight which can be positive or negative. A rollover occurs when reinvesting funds from a mature security into a new issue of the same or a similar security or moving a forex position to the following delivery date.

Example

Account Currency: USD

Pair: EURGBP

Lots: 5

Type of Order: Sell

Pair Quote Currency: GBP

This works by eliminating the usual carry payments and swap charges that normally apply for positions held overnight or over weekends.

For additional information on inactive (dormant) accounts, you may refer to the Client Services Agreement uploaded on the Company's website.

Fees for internal transfers:

In the event that a client submits a request to transfer funds internally between his own accounts of different currency, he will be charged 0.2%. If his accounts are of the same currency, then no fees shall be charged.

Example:

Client submits a request to transfer 100 EUR from his account to his USD account.

0.2% fee will be applied on the 100 EUR.

$$100 * 0.2 / 100 = 0.2 \text{ EUR.}$$

$100 - 0.2 = 99.8$. This 99.8 will be converted in USD in his USD account.

Example:

| | |
|------------------------------------|----------------------------------|
| Account Currency | EUR |
| Pair | EURGBP |
